in recent years the field of oncology has witnessed a number of technological advances including more precise radiation therapy and

minimally invasive surgical techniques three dimensional 3d stereotactic and proton beam radiation therapy as well as laparoscopy and robotic surgery can enhance clinician s ability to treat conditions that were clinically challenging with conventional technologies and may improve clinical outcomes or reduce treatment related problems for some patients both patients and physicians seek access to these new technologies which are rapidly being adopted into standard clinical practice such demand is often propelled by marketing that portrays the new technologies as the latest and greatest treatments available however evidence is often lacking to support these claims and these novel technologies usually come with higher price tags and are often used to treat patients who might have achieved similar benefits from less expensive conventional treatment the increased cost of novel treatments without adequate assessment of how they affect patient outcomes is a pressing concern given that inappropriate use of expensive technologies is one of the key factors that threaten the affordability of cancer care in the united states to explore these issues further the national cancer policy forum ncpf of the institute of medicine organized a workshop in july 2015 this is the third ncpf workshop in a series examining the affordability of cancer care participants explored clinical benefits and comparative effectiveness of emerging advanced technologies for cancer treatment in radiation therapy and surgery and potential strategies to assess the value and promote optimal use of new technologies in cancer treatment this report summarizes the presentations and discussions from the workshop

the present book intends to provide a comprehensive guide to the field of robotic bariatric surgery it covers all the stages and procedures needed to fulfill credentialing for performing robotic surgery also robotic surgery is presented as an institutional program and we describe how to establish a robotic program in a hospital environment the currently accepted and most common procedures sleeve gastrectomy gastric bypass and duodenal switch are described in detail with a step by step description of the techniques followed by a wealth of photos and videos for each case special attention is given to the employment of robotic bariatric surgery in exceptional conditions such as in super obese patients reoperations and revisional procedures critical issues for the success of the robotic surgical interventions such as anesthesia are also addressed finally the outcomes of robotic bariatric surgery are described including long term weight loss improvement and resolution of comorbidities and improvement in quality of life bariatric robotic surgery is the first book specially devoted to this modality of

surgical intervention it is a fundamental tool for surgeons residents and fellows who want to start a robotic bariatric surgery program the book also helps experienced robotic surgeons to keep up to date with the various available robotic surgical techniques
